As more and more service providers and companies operate a single network infrastructure to support an increasing number of services, the ability to transport custom to applications needs is of paramount importance. In that respect, network operators have been exploring traffic engineering techniques For some years, but they have obviously encountered many scale problems that prevent them from having extreme to extreme and grain control over the countless services they offer. Segment Routing Traffic Engineering (SR-TE) has changed that game and has become The undisputed solution to deliver scale traffic engineering capabilities. The routing of the segment allows the implementation of extreme-to-end policies in the metro, WAN and independent data centers. This prevents complex conversion of protocol between network domains while maintaining scalability \*simplification in its best simplification. A wide range of advanced network services can be delivered using Efficient Efficient Efficient Efficient EV algorithms, such as low-level paths based on dynamically measured link regions. SR-TE can also calculate and maintain disjoint paths (without sharing the same fiber, not sharing the same duct, etc. This improves network resilience and end user satisfaction. The route calculation element SR IOS XR (SR PCE) extends SR-TE capabilities by offering route calculation and road maintenance services to header routers. The horizontally scalable SR PCE solution allows to achieve a very high scalability. Automated management functionality uses existing BGP communities to automatically direct services traffic in the desired SR policy. While in the past it provided multiple domain servicesand L3VPN) came with complexity and climbing ladder. Problems, innovation SR-you on demand of Next Hop (ODN) has scaled and automated the establishment of polytics between domains. Routes no longer need to be redistributed, polytics no longer need to be ODN automatically activates the generation of an end-to-end SR policy by pointing out a service route. This greatly simplifies the network operation. IGP SR Flexible Algorithm (Flex-Something) enriches the SR-TE solution by adding additional segments with properties different from the IGP Prefix segments. The network operator defines the properties of these Flex-Something segments, providing maximum flexibility. Flex-Something makes possible multiple optimizations of the same physical network infrastructure throughout several dimensions &c" can be optimized for low latency vs. another for bandwidth, you can offer decommunal paths through two different planes. IGP SR Flex-Something provides simple support for 5G slices. A Kindle version of this book is also available As increasingly Service Providers and Businesses operate a single network infrastructure to support an increasing number of services, custom transportation capacity to applications needs is of paramount importance. In this regard, network operators have been exploring traffic engineering techniques for some years, but they have obviously encountered many scale problems that prevent them from having final control in order to provide the services they offer. Segment Routing Traffic Engineering (SR-TE) has changed that game and has become the undisputed solution to provide scale traffic engineering capabilities. Segment Routing allows the deployment of extreme to extreme policies in the independent domains of Metro, WAN and Data Center. This prevents complex conversion of protocol between network domains while maintaining scalability - simplification at the best time. A wide range of advanced network services can be offered using efficient SR algorithms, such as low-speed routes based on measured link delaysYou can also calculate and maintain huge paths (do not share the same fiber, not share the same duct and successively successively evalc sotnemucod sol ed serotua soL .oviv ne senoiatnemelpm selbacsed noc setnelic ed n'Aiccart etnatropmi anu \*Anag 6vRS. 9102 nE 9102 erbutCO .Auga fdp le eugraced y ojab ed secalne sol evresBO .sedyAv 6 ed eires anu ne augeipled ed osu ed satelam y 6vR ed aGolonceTá atneserp slifslif ceneralC .G5 sadanaber arap ollicnes etropv nu anicroporop ogIA-xelF RS PGI .sotnitsid sonalp sol ed s@Avart a selanumoced sonimac recerfo edeup es .adnab ed ohca arap arto .sv aicnetal ajab arap razimtpo edeup es :senoisnemid sairav ed ogral o acisAf der ed arcutrsearfni ansim al ed senoiacizimtpo selpti?Am elbisop echa ogIA-xelF .dadilibixelf amix;Am al odnaoicroporop .ogIA-xelF sotnemes sotsed ed sedadeiporop sal enited der od rodarepo IE .xiferP PGI ed sotnemes sol a setneretid sedadeiporop noc selanoicida sotnemes odneida:AA ET-RS n'Aiculus al eceuqime JogiA-xelF( mhtirogIA elbixelF RS PGI .der ed n'Aicarepo al etnemenrone acifilpmis otsE .oicivres ed atur anu rala:As la omertxe a lanif RS ed acitAlop anu ed n'Aicareneg al etnemacli?Amotua avitca NDO .sadarugifnocepr res natisecon on ay satur sal .oinimodretni sacitAlop ed otnemiceclbatse le odazitamotua y etnemacli?Ard odalacse ah JNDO( poH txeN dnamed-nO ET-RS n'Aicavonni al .dadilibalacse y dadijelpmoc ed samelborp noc \*Agell JNPV3L & NPV2L( soimimoditum soicivres ed n'Aicatserp al odasap le ne euq sartneim .adaesed RS ed acitAlop al ne soicivres ed ocit;Art le etnemacli?Amotua rigirid arap PGB ed setnetsixe sedadimucoc sal azilltu adazitamotua n'Aicardi ed dadilanoicual al .atua yun dadilibalacse anu raznacila etimerep ECP RS ebalacse etnemlatnoizroh n'Aiculus al .odazebacne ed srekuor sol a sonimac ed otnemineam y n'Aicatumoc ed soicivres odneicero ET-RS sedadicapac sal aAlpma RX SOI /ECP RS( htaP RS n'Aicatumoc ed odargetni otneme IE .selanif soirusu sol ed n'Aicafstias al y der al ed aicneiliser al arojom otsE n'Aicubirtsid n'Aicubirtsid al etneme odaucaedia orbilbuqe le acusb ouq arutocetruera anu \*6vRS ed sisi;Aa 6vRS led odats le erbos adazilauca n'Aicamrofni nanocroporop JMGP-toN y HRS( and centralized optimization. The routing of the segment emerged as a new technology in 2013 and has had a great impact with service providers, hyper-scale web providers and large companies. As a key enabler for the transformation that all networks must go through in the future, it is not surprising that adoption is growing exponentially. But what will you really do for your business? This site is maintained by employees of Cisco Systems, Inc. employees.
